

# ISTQB Certified Tester – Advanced Level: Test Manager (English, CTAL-TM)

Kurs ID: CTALTM-EN

Dauer: 4 Tage

ab € 2.250,00 zzgl. MwSt.

[Mehr Details](#)

In accordance with international standards, you will get to know different documents for test planning and you will be introduced to the basics and the relationships between error, risk and test management. In the course of the ISTQB<sup>®</sup> Test Manager training you will learn which quality data and error statistics can be obtained during the test and how well-founded product approval decisions can be made on the basis of such objective test data. You will get an overview of different organizational forms and their possible advantages and disadvantages. This enables you to develop an optimal form of organization for your specific situation.

A Foundation Level certified tester can:

- Understand what testing is and why it is useful
- Understand the fundamental concepts of software testing
- Identify the test approach and activities to be applied depending on the testing context
- Assess and improve the quality of documentation
- Increase the effectiveness and efficiency of testing
- Adapt the test process to the software development lifecycle
- Understand the principles of test management
- Write and communicate clear and understandable defect reports
- Understand the factors that influence testing priorities and effort
- Work as part of a cross-functional team
- Know the risks and benefits of test automation
- Recognize essential skills required for testing
- Understand the impact of risks on testing
- Report effectively on test progress and quality
